Projects

TrueCar

- Designed the interface and developed a dummy car selling website that showcases some lists of cars for sell with sliders and view the available shops to buy the specific cars. I used HTML, CSS, JavaScript, and created a simple database to store user registration information using mySQL.

PocketBook (All in One)

- Designed an application where users can store all their personal or professional identity such as NID, Driver's License, Passport, Birth Certificate, Student ID, Office Id etc. Users are able to access all their identity through a single app. All information must be verified. Admins can verify the Users information using the same app through a QR code provided by the user through the app, users don't need show any physical papers to verify their information.
